Clear Browser Cache

Using Safari

What is cache?

- Websites save elements of a site onto your computer.
  - Images
  - Style sheets
  - Java scripts
- This speeds up load time when the site is revisited because the browser pulls some of the elements from your computer.

Why clear cache?

- Web developers often make updates to your website files.
  - Fix bugs
  - New enhancements
- Cache can sometimes get corrupted.
- By using cache, your browser is not using the most recent updated files.
- Clearing cache in a browser can help fix issues and/or reload the most current code.

NOTE:

- Clearing history in Safari will clear:
  - Cookies
  - Cache
  - Browsing History
- If you have saved your login information on certain sites, *you will need to login again after clearing browser history*

engageRE TECH ASSIST

Procedure

1. Open Safari
2. Click on Safari in the top menu
3. Select **Clear History**
4. Using the drop down arrow, select the option to Clear **All History**
5. Click **Clear History**

NOTE:

- These procedures may vary depending on your browser version.
- Use the Internet if you need to search for instructions for a different version.
- It's recommended to always have the most current version of your browser software!
